Artificial Manure Grows Good Corn

CORN STALKS, STRAW, AND NON-LEGUME COVER CROPS rot down just as quickly — make just as good humus — and grow just as good corn — when plowed down "As Is" with 300 pounds of Granular AERO Cyanamid per acre. This method saves time, labor, and hauling.

In an Indiana test last year, 250 pounds of Granular AERO Cyanamid per acre increased the yield of kiln-dried corn by 17 bushels.

Grow Better Cover Crops with 'Aero' Cyanamid

AT THE END OF THE SEASON — after you have grown and harvested a cash crop — your soil does not contain enough available nitrogen to grow a good cover crop.

But, if you broadcast Granular 'Aero' Cyanamid at the rate of 150 pounds per acre before planting the cover crop, it will supply the nitrogen needed by your soil. And you will obtain a much larger yield of organic matter to plow down.

Planting HYBRID CORN?

Then remember this fact . . .

Year after year
by every test

there's one hybrid corn that has
stood out head and shoulders above
all others—that's

**BIGGER
YIELDS**

IOWEALTH King of the Hybrids

■ Iowealth has won more yield tests and performance tests, year in and year out. Its stiff stalks stand up in high winds. Its 8 ft. roots carry it safely through severe drouths. Its big, even ears make easy husking. It is produced by one of the world's largest growers of hybrid corn.

Iowealth gives 10 to 20 bushels more corn per acre, yet it costs less than \$1 an acre to plant.

Why be satisfied with just an "ordinary" hybrid, when you can get the BIGGEST PRODUCER of them all, at no higher price? Stop in. Don't order hybrid corn from anyone until you get the facts, and our prices.

⚠ CAUTION: Iowealth is NEVER sold by agents or canvassers. It is sold only through reliable dealers—so you KNOW you get exactly what you order.
